

Land and naval module

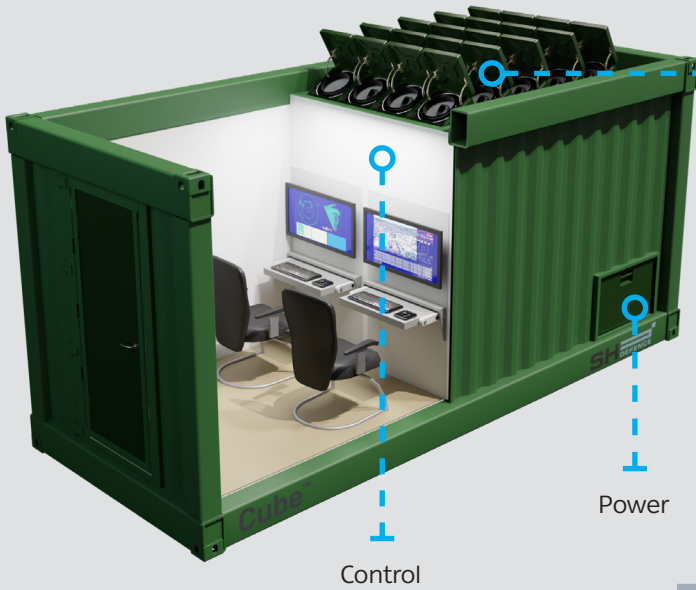

## Precision Loitering Munition Stand-alone unit

### Cube™ Mobile Module

The containerized Cube solution from SH Defence is a fully autonomous multi-canister launcher, land- or sea-based, as a part of The Cube™ System.

The modular Loitering Munition solution can be configured for different suppliers' Loitering Munition

types, quantities and operating systems. It integrates into a 20ft or 40ft container. The model shown is with Loitering Ammunition from AeroVironment and Uvision, respectively.

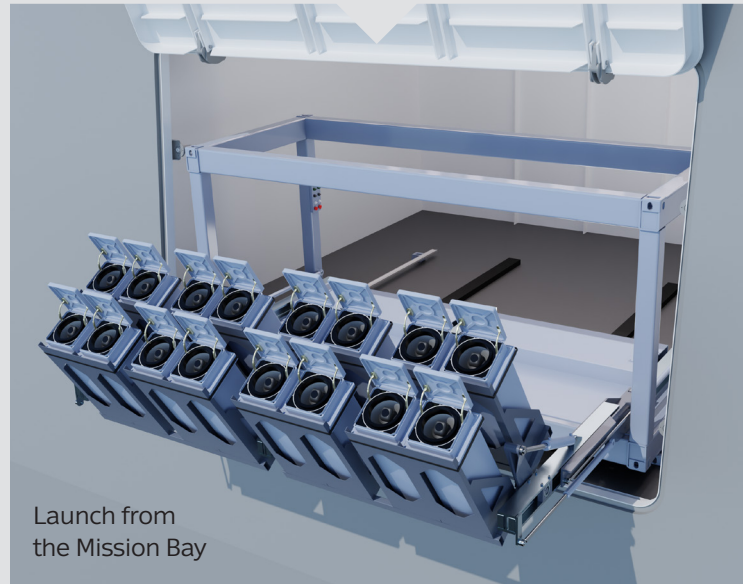

Stand-alone unit with integrated Switchblade® or Hero System loitering munition and C2 control room.

**Module for Naval and Coast guard platforms.**

Multi-canister side launch system consisting of a dock for loitering munition on a Cube™ 20' Base frame.

A hydraulically operated telescopic arm extends the canisters from the vessel's Mission Bay, allowing almost vertical launch of loitering munition.

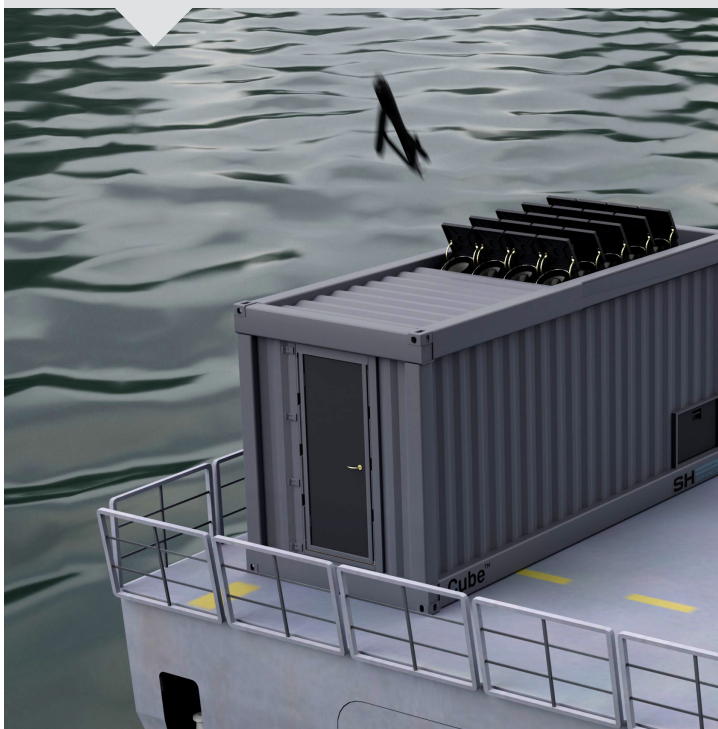

Launch from the Mission Bay

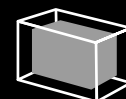

**Interchangeable mission module**

Because of the 20-foot size corresponding with ISO containers, the modules can be locked in place with Twist locks or equivalent.

This makes it possible to use the system on various deck structures, such as helicopter landing decks or stern hangar decks with open access to the stern.

The Cube™ is a modular system developed to host and deploy equipment. All modules use the footprint of shipping containers and are loaded into the side of platforms with mission bays or placed on the aft.
